

THE REVOLUTION OF VOICE LOGGING TECHNOLOGY

- DTMF and FSK
- 4CH/8CH/16CH
- Voltage /Audio/Key control

All-in-one Design

The all new USB series multi-channel recording system is an all-around telephone recording sys. System is connected with the PC via a USB line. Each record is stored in the PC hard disk.

Multi-channel Recording

One computer can connect 1 USB recording box (16 channels at most).

Data Management:

Recording sys can print out, statistic and analysis for dialing in, dialing out and incoming call data. Also can transfer GSM recording data to MP3 and WAV format

Digital Recording:

Fully digital mode for record and playback hi-fi reappearance of the original sound. 1G hard disk space can contain recording data for 175 hours.

High Quality Audio Circuit Design

USB series provide high quality recording sound with low noise, low attenuation, high-sensitivity circuit.

Automatic Recording:

Audio control(A) voltage control(V) and key control(K) are available. Dialing in and dialing out phone can be recorded automatically.

Number Showing:

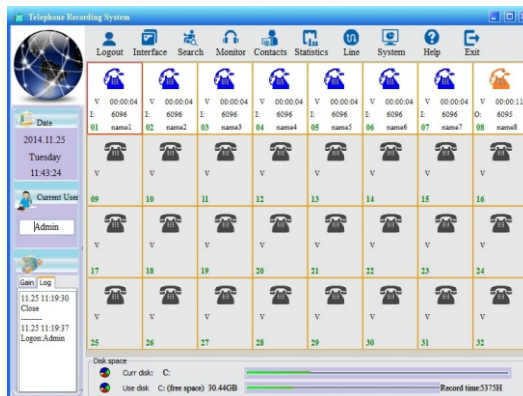

Telephone number "DTMF" and "FSK" mode can be showed and recorded correctly

Time Setting:

Set starting and stopping record time as you wish during 24 hours.

Main Interface

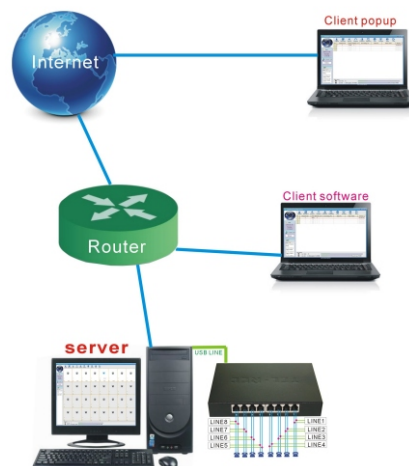

Client Management:

Recording sys can input and modify customer information through server. Pop up client information through local PC and network automatically according to incoming call number.

Multi-Level User Accounts:

USB allows the administrator to add a new user, to delete a user, to configure user various operation authorization.

Monitor:

Any channel telephone can be monitored in real time through local computer and network.

Safe and Reliable:

Password management and classified customer right make recording data safer and more reliable. Any recording won't be missed.

Cycling Record:

Cycling record according to designated record space and automatic deletion of the earliest record in batches.

Quick Search:

Quick search and print of complicated call record; search and print functions of channel number, call date, phone number, company name.

Record Mode:

There are three record modes of the system for you to choose from: auto, voice and manual control.

Auto voltage control: record according to voltage change, ie, start when telephone is picked up while finish when telephone is hung up.

Voice voice control: record based on whether there is sound signal in the line check, such as interphone and so on;

Manual Phone keystroke control: start and finish the record according to the content of the call by the caller through keystroke.

Alarm Function:

key operation, machine and fault with alert and warning.

Parallel Operation:

Record, call record, search and playback in the same time.
